

ASSIGNMENT: Shop Order Form

For this assignment, you must create an HTML order form for your stores web site. Save it as **orderform.html** in your forms folder.

Your form should employ all of the following structures: text, password, textarea, checkbox, radio buttons, and select lists. You will also need to include submit and reset buttons.

Your order form will need to provide the following:

1. The product the customer is ordering.
2. customers: name, address, City, State, Zip, Country, Phone, e-mail. The form should also provide an area for the customers' shipping address.
3. An area for shipping charges should also be included.
4. How is the customer paying? CASH, CHECK, MONEY ORDER, CREDIT CARD.
5. Give an area to insert the credit card number and expiration date.
6. Provide an area for any type of special instructions.
7. Please make sure you use the same Cascading Style Sheets as your store project

What is the best way to find ideas? Research them on the internet!

REMEMBER: to be considered for a 100... YOU MUST DO EXTRA! That includes making buttons for submit and reset in ADOBE Photoshop! That also includes using tables to create your form!
